I have a set of non-linear equations (kind of similar to quadratic equations) that I want to solve. I do not have access to the source code to optimize it for any kind of criteria, so I am stuck with whatever is output from the equation. I could find various online systems that will solve the equations for me. But is there a way for me to write my own code for solving them? A: You can solve the system using SciPy and NumPy. This requires installing NumPy and SciPy. See the documentation for this here: The main part of NumPy is the linear algebra package. So first download these and install them. # Install NumPy sudo apt-get install python-numpy # Install SciPy sudo apt-get install python-scipy Then, you can take a look at some examples for solving the non-linear equations. Press the keygen to get the full program. Q: What is the best way to learn MapReduce framework for Java? I'm new to the MapReduce framework. I wonder which is the best way to learn MapReduce: through source code? through examples? through blogs/tutorials? through Java Hadoop books? through videos/tutorials? A: I'd say tutorials are the best way to learn Hadoop. The amount of time you would need to set up a Hadoop environment by yourself, put it to use and debug your programs with it can be rather extensive. Tutorials are nice because you can follow along as they do something in an easy to understand way. Note that although a lot of them include Java, they are mostly written in pseudocode which means you can learn even if you don't know Java. Most of my old writing is pretty embarrassing, and I don't want to dig it up. There's nothing wrong with it per se, it just wasn't the best writing, and I'm probably not in a good place to say I'm proud of it. I am proud of some parts of my old writing, and I think people have found those things amusing, but there's also a feeling of shame attached to them. I don't have the same connection to the mundane interactions with the world that I had before I started writing. I'm proud of my other writing too. I can't help but feel that when I wrote those pieces, I was reaching for something more than I had before I began, and that, in the end, the writing wasn't good enough for me. It took a lot of time and effort for me to get to the point where I could stand on my own, but the work was worth it. I know I'm less of an asshole than I was before I started writing, and I know I'm capable of deeper human interactions. I think of The Old Man and the Sea a lot, and I think of how much I'm better than the protagonist of that story. I think of The Old Man and the Sea and I think of him sometimes as a kind of ghost. He's the person I aspire to be. He's the
