Run the first time the keygen, activate a new desktop shortcut for Autocad and choose the one you want, then run the second time and continue with the instruction. You are done with the registration, you are now ready to purchase a license for Autocad. --> my local store said it was going to be a while. I'm so glad to be one of the first, I'd be lying if I said I didn't have reservations (and no, I'm not lying). Re: MMJ Questions for Legalization in California? Then there's the couple of times I've gone to a dispensary for edibles, usually lollipops, but also other mixtures, like the minty goodness pictured above. They're usually the best because there's a delicate balance of THC and CBD, I've had some edibles that made me feel more mellow or energetic than usual, and others that made me incredibly sleepy. From the law standpoint, it's been a few years since I first read up on it, but I do remember that after edibles, a prescription isn't required. I know for a fact that edibles are legal in my state, so I'm a little confused. Re: MMJ Questions for Legalization in California? It depends on what you are trying to get for the strain. It's legal to take the seeds and grow them at home, but growing to extract is illegal. Can a normal person go to a dispensary and buy a 3-4oz bag of buds and take that? I'd assume no, and not go to jail for that, but I'm not a lawyer. If you are buying a bottle of oil for cooking, I think you can get away with that. Otherwise, I don't think you can just go to the dispensary and buy a bottle. They probably need to be re-tested and probably they'd have to be done one-by-one, so it takes awhile. I'm sure dispensaries have a way to find out, but I've never been to a dispensary. This is why I think it would be cool
